CartonCloud - Android Developer Challenge

The goal is to implement a simple Android app showing yesterday's weather for Brisbane.

Tools / Frameworks:

- Android Studio
- Java
- React Native
- MetaWeather API

Functionality:

Create a basic Android app project. Show a single view featuring a button triggering an API call to retrieve yesterday's weather information for Brisbane (if multiple results are available, choose the latest one). The returned information is to be displayed in a React Native view shown from within the Android app.

Note: We're interested in integrating React Native with an existing app, so please don't create a React Native-only app.

Resources:

- MetaWeather API:
  https://www.metaweather.com/api/
- React Native framework:
  https://facebook.github.io/react-native/
- React Native integration with existing apps:
- https://facebook.github.io/react-native/docs/integration-with-existing-apps.html

Please send your completed project to **karin.laner@cartoncloud.com.au**.

Have fun & please do not hesitate to contact us with any questions about this task!
